Meeting Jun 16, 2026 at 09:19 EDT

Meeting records  Transcript

Summary

The team reviewed user management, platform permissions, and interface usability issues to define necessary system improvements.

User and Role Management

Administrative controls for user access and the 5 defined roles were reviewed to address data integrity concerns. The system currently supports user creation and role definitions.

Dashboard and Task Functionality

Reviewers determined that dashboard charts require interactivity to allow data drilling. Consensus was reached to prioritize making roadblock tasks visible within the global tracking system.

System Operations and Interface

The team identified a need for searchable, hierarchical menus within the task creation interface. Operational challenges involving financial management and authentication were also acknowledged.

Decisions

Aligned

- **Riverside read-only role defined** A new read-only user role will be implemented for Riverside to allow viewing all items without editing permissions.
- **Blocked task visibility requirements set** Blocked tasks are required to be displayed under the Roadblocks tab, with additional visibility on the blocker's personal task list.
- **Task creation UI workflow defined** The task creation interface will be updated to include search functionality and a hierarchical dropdown menu that defaults to selecting strategic pillars before associated tactics.

We've **updated the Decisions section** using your feedback.

Let us know what you think: [Helpful](#) or [Not Helpful](#)

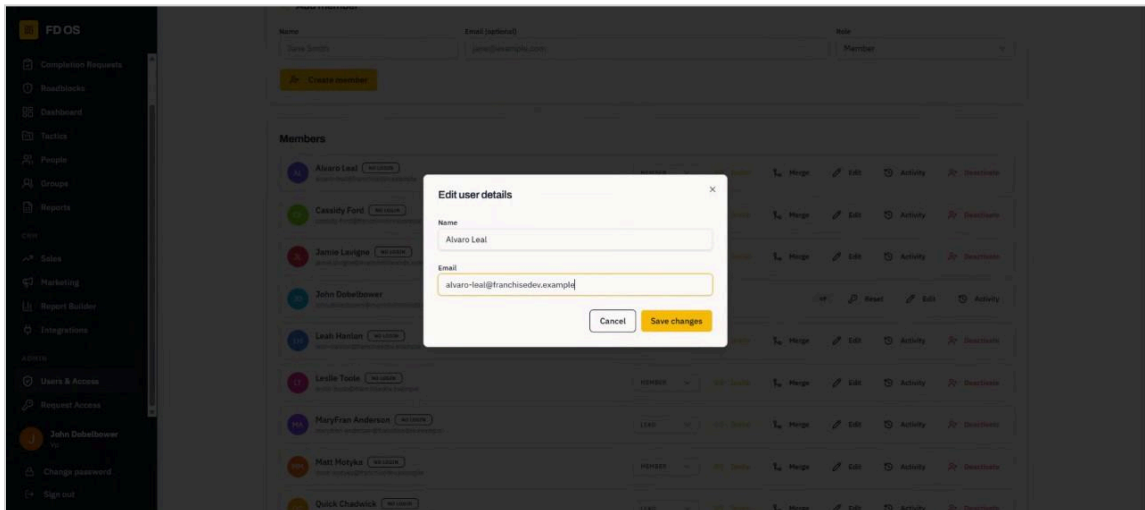

Next steps

- ☐ [John Dobelbower] Update Emails: Update all user email addresses to the correct values in the system.
- ☐ [John Dobelbower] Create User: Add John Steves to the user list within the application.
- ☐ [John Dobelbower] Send Subscription List: Take a photo of the paper listing all subscriptions and send it to Ryan.
- ☐ [Ryan Maynard] Clean Up Tasks: Remove all dummy or test tasks from the application.

Details

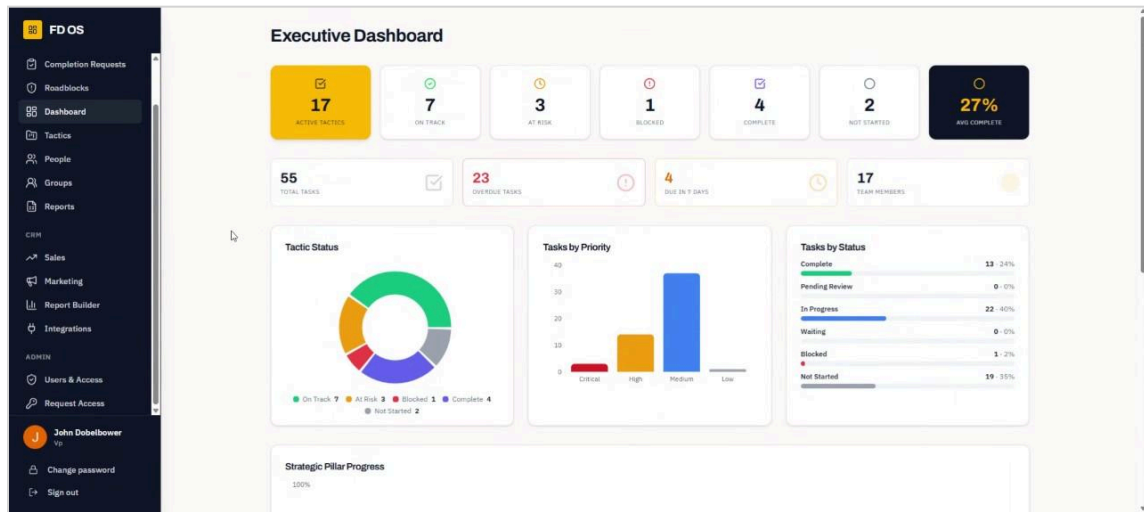

Did the screenshots in this section make your notes [better](#) or [worse](#)?

- User Management and Data Integrity:** John Dobelbower identified issues with incorrect email addresses and missing personnel, such as Chelsea Hall, following an Excel spreadsheet upload. Ryan Maynard pointed out that users can be managed via the "users and access" tab on the left, which allows for creating, deleting, and merging members ([00:00:00](#)). Ryan Maynard suggested that adding a bulk edit function to upload spreadsheets would improve efficiency, as modifying email addresses individually is time-consuming ([00:01:14](#)).

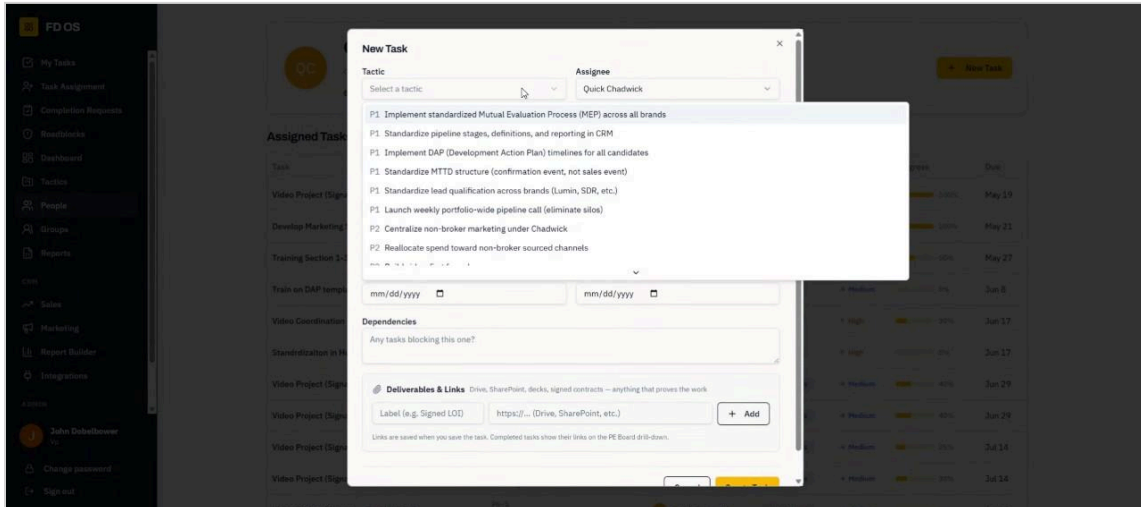

- Role Permissions and Definitions:** Ryan Maynard and John Dobelbower clarified the five user roles: member, lead, admin, and VP. Ryan Maynard explained that members have no elevated permissions and cannot assign tasks, while leads act as working managers who can edit initiatives and assign tasks ([00:01:14](#)). John Dobelbower identified a requirement for an additional "read-only" role for private equity partners to allow them to view all information without making any changes ([00:04:57](#)).
- Team Roster and Account Deactivation:** John Dobelbower verified the team list, noting that John Steves was missing from the system, and planned to add Michelle and Katie Lambertson ([00:06:16](#)). Regarding deactivated accounts, Ryan Maynard explained that they remain in the system to maintain an audit trail ([00:04:57](#)). John Dobelbower and Ryan Maynard confirmed that the system updates in real-time as changes are made to the member list ([00:06:16](#)).
- Dashboard Usability and Data Visualization:** John Dobelbower reviewed the main dashboard and argued that charts and graphs, specifically for active tactics and priority tasks, are not currently interactive. The consensus was that these visual

elements should be clickable, allowing users to drill down into the source data to immediately identify items such as overdue tasks or critical priorities ([00:08:36](#)).

- **Roadblock Task Management:** John Dobelbower and Ryan Maynard tested the roadblock feature, finding that blocked tasks do not automatically appear in the VP's roadblock view or on their personal task list. They agreed that all roadblocks should populate the global roadblocks tab, and if a specific user is the one blocking an item, that task should also appear in their own personal task list ([00:11:02](#)).
- **Progress Meter Logic:** John Dobelbower raised concerns regarding the progress meter on tactical items, which calculated 20% progress without a clear methodology. The concern is that the system likely averages individual tasks, which may inaccurately represent the actual completion status of a tactic if tasks are marked as 100% complete prematurely ([00:13:43](#)).
- **Export Features and Integration Status:** Ryan Maynard highlighted the ability to download a board brief as either a PDF or an Excel file. They noted that the sales, marketing, and report builder sections are currently not connected or integrated into the system ([00:15:05](#)).
- **Task Creation Interface Improvements:** John Dobelbower and Ryan Maynard discussed updates for the "create new task" interface, noting that the current list of tactics is too long and lacks search functionality. They agreed that the interface should be searchable and feature a hierarchical drop-down menu, where a user first selects a pillar and then chooses the corresponding tactic ([00:16:27](#)).

- **Operational Costs and Financial Context:** Ryan Maynard and John Dobelbower discussed ongoing business expenses, including \$200 per month for AI subscriptions, \$165 per month for internet, and \$100 per month for REPLIT services. They also touched on difficulties with filing tax forms with the IRS and the challenge of managing business finances ([00:18:54](#)).
- **Authentication and System Access:** Ryan Maynard and John Dobelbower reviewed authentication issues, noting that some accounts are currently tied to specific computers due to the initial invitation-based setup. They confirmed that mobile access works and determined that they need to clean up test tasks before proceeding with the system ([00:23:50](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)

How is the quality of **these specific notes**? [Take a short survey](#) to let us know your feedback, including how helpful the notes were for your needs.
